

Cancard Inc. added as GET Group Card Printer VAR in Canada

Waltham MA, USA: April 6, 2010

The Passport & ID Division of Global Enterprise Technologies Corp. (GET Group) is pleased to announce its partnership with Cancard Inc. as a Value-Added-Reseller for the Toppan CP400 security ID card printer in Canada. GET Group has worldwide rights outside Japan to market Toppan security passport and ID printers.

The CP400 is used in several drivers' license, ID and access control projects worldwide as well as being deployed in Japan for the printing of their national ID card. The CP400 is the world's only desktop, re-transfer printer with solid pigment ink and 600 dpi technology and the ability to print micro-text. Highly durable and guaranteed for 10 years, solid pigment ink is a forensic-level security feature. These features are an excellent fit for all levels of government, law enforcement, higher education and Fortune 500 markets.

Sherry Dutzy, International Business Development Manager for GET Group, noted that "Cancard's expertise in the secure card issuance market in Canada was a key factor in their selection. The CP400's unique technology along with Cancard's market strength across Canada and commitment to customer service make it a winning combination for our customers."

Scott Logan, General Manager of Equipment and Sales for Cancard, stated: "We are extremely excited to work with GET Group to bring the Toppan CP400 printer to the Canadian market. Two features of this printer solve our customers' problems that needed addressing for years. First, the CP400 pigment-based ribbons do not bleed and there is little fading compared to existing dye sublimation products. Proximity and smart card users' budgets can benefit enormously in longer lasting ID cards. Second, the CP400's high 600 DPI printing resolution allows for variable micro-printing. This is an inexpensive anti-counterfeit measure that is easily identified without any access to a database. Our government and law enforcement customers can greatly benefit from the Toppan CP400 capabilities."

About Cancard Inc.

For over 20 years, Cancard has served clients across North America as a leader in identification, card personalization customization, and fulfillment solutions. Specializing in turnkey integration and customized solutions, Cancard provides total solutions to the unique and diverse markets it serves, focusing attention on the specific needs and requirements of each client. Its success is rooted in its flexible company structure, the drive to stay ahead of the evolving marketplace, the knowledge and experience of its employees, and a commitment to the customer/vendor partnership.
